

## Burns and Plastic Surgery Occupational Therapy

### Instructions for using Scarsil / Kelocote Silicone Gel

Your Product is \_\_\_\_\_

#### Directions for Use

The gel should be applied in a thin layer to the affected area three times a day, following scar massage, using the instructions below.

- Clean the area to be treated with mild non-perfumed soap and water, pat dry.
- Gently spread a **very thin coat** over the affected site.
- Allow to air dry for 4-5 minutes before covering with clothing or make-up (please be aware that gel may stain clothing if it is not completely dry). If gel has not dried within 4-5 minutes, you have used too much – remove the excess and allow the drying process to continue.
- Cosmetics and sun cream can be applied over gel following complete drying.

#### Care of Gel

- Keep out of reach of children.
- Keep away from heat.
- Store at room temperature below 25°C.
- Do not use after the expiry date (EXP) printed on the pack.

**If you require any further guidance or have any questions about the silicone gel or if the scar area shows any evidence of skin irritation, rash, open or weeping areas, remove gel and contact your Key Worker**
